## TRUSTWood™ Features and Benefits

- Improved corrosion performance when in contact with fasteners and hardware.
- 50 year durability guarantee against decay and insect attack.
- Reduced chemical footprint.
- Water Resistance - minimising surface checking and timber movement.
- Health and safety for installers.
- After life. Can be disposed of safely – unlike other treated products.
- No painting, maintenance free.
- Environmentally friendly.
- Green Guard Certified for safe use in high contact areas - contractors and downstream users.
- Colour enhanced timber dock systems.

### Uses

- Residential and commercial construction.
- Viticulture - vineyards and wineries.
- DOC / Government Departments.
- Childrens playgrounds.
- Fencing and outdoor products.
- Landscaping sleepers.
- Agriculture.
- Retaining and Vege gardens.
- Marine timber docks.
- Marine walers.

## TRUSTWood™ Products available

### Fencing Products

- R/S Post & Rails.
- Machined Square Posts.
- Machined Fence Paling profile.
- Machined Fence Rails.

### Marine Products

- Premium Decking.
- Structural Marine Walers.

### Decking products

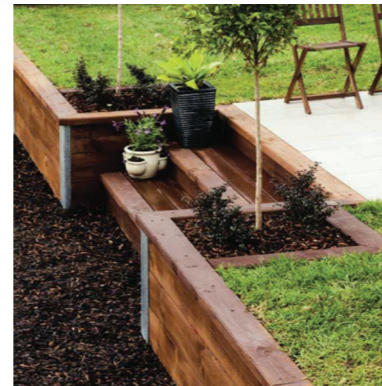

- UltraDeck50™.
- Premium wet.
- Joists and trim boards.

### Garden Products

- Sleepers.
- TG&V Retaining Wall.

### Custom

- Roundwood to order.

## Indoor & Outdoor Colour Infused Timber *that goes the distance*

TRUSTWood™ from North Sawn Lumber is an innovative, high quality, durable timber range with an impressive 50 year durability guarantee. \* TRUSTWood™ offers environmentally aware consumers an alternative treatment option with a reduced chemical footprint, without compromising performance.

### Revolutionary Technology

TRUSTWood™ "Copper" uses revolutionary technology to pressure treat and colour infuse timber for premium decks, marine walers, fences, landscaping, and general marine and construction uses. The infused colour may vary between grades, density and finish of timber products. In general, rough sawn timber is a darker colour.

TrustWood™ "Copper" premium decking and outdoor products use Microshades technology which is a colour additive that is fully infused into the timber during the treatment process, achieving a rich colour while maintaining the natural appearance of the timber. Additionally, the product has added water repellent which minimises movement and reduces surface checking.

\*TRUSTWood™ is produced with a Copper Azole preservative which offers a 50 year limited transferable durability guarantee against decay and insect attack assuring lifelong enjoyment of your timber, inside and out.

MCA (Micronised Copper Azole)  
50 year limited warranty. Class H3.2, H4 & H5

## TRUSTWood™ Micro-pro Treatment is the first treated wood process to receive EPP (Environmentally Preferable Product) Status

TRUSTWood™ uses Micro-pro technology which is the first treated wood process to be certified under Scientific Certification Systems Environmentally Preferable Product (EPP) program based on Life-Cycle Assessment.

### Largely Eliminates Copper Releases

Wood products treated with the process result in the release of 90% to 99% less copper into aquatic and terrestrial environments when compared to standard treated wood products. The very small amount released bonds readily to organic matter in the soil and becomes biologically inactive, thus effectively eliminating eco-toxic impacts.

TRUSTWood™ incorporates a pigmented colorant system & water repellent additives.
